

Key Features

- Up to date and dynamic delivery schedule always available via mobile device.
- Electronic signature capture for Proof of Delivery
- Each delivery location plotted to an on-screen map
- Integration with fleet management software to update tracking & mileage information

Key Benefits

- Always in touch with base organisation
- Efficient use of time and resources
- Efficient route planning and mileage capture

Mobile Delivery Diver Portal

The Anglia Mobile Delivery Driver Portal is designed to provide delivery drivers with a vital mode of communication with the base organisation to ensure that they continue to do what they do best – deliver.

The Mobile Delivery Driver Portal provides a comprehensive suite of tools for delivery drivers on the road, to allow the efficient delivery of goods. It has the following features:

Dynamic Delivery Schedule

Drivers are constantly updated with which deliveries they need to make and in which order. If an urgent delivery request is received the driver can quickly be alerted and the delivery schedule updated accordingly.

Electronic Signature Capture

Customer proof of delivery (POD) signatures can be captured on the mobile device for each delivery. Signatures are captured along with a timestamp. Signatures can be checked using biometrics to confirm the authenticity of the signatory. Signature can be stored for traceability and tracking purposes.

Driver Directions

On screen maps and location information can be sent to the driver's mobile device for each delivery they have to make.

Fleet Management

The Delivery Driver Portal can be fully integrated with a fleet management solution to provide full tracking of vehicle mileage and efficient utilisation of drivers.

Electronic Signature Capture screen showing name of customer, and date/time stamp
